

June

Fireworks Safety Month

Fireworks may cause serious burn and eye injuries.

Carless use of fireworks results in about 10,000 injuries every year.

Sparklers are **HOT! HOT! HOT!**
1,000 degrees hotter than
boiling water!

**Sparklers are a major cause of
injury in children.**

Celebrate Safely

**Adult supervision is
required for all
fireworks activities.**

**Adults should
handle and light
the fireworks.**

**Fireworks are
not toys; do not
aim at people.**

**Have a water
hose or bucket
close.**

**Obey the law
about fireworks
use.**
